The gist

We are eager to understand how you use AI to build. Choose one of two lenses (described below), then build a new application/experience using AI. We want you build something meaningful to you: to make you more productive, healthy, or related to your hobbies. You can also use an existing project, provided you are the only one who created it - and please explicitly call this out in your submission.

Out of respect for your time, we are limiting the time you spend on this exercise to a maximum of 3 hours. Once complete, record a short video walking us through your project: how you approached the problem, what you decided to build, and how you used available AI tools (submission details provided below).

Use AI, LLMs, coding copilots, AI design tools, or any other AI tools you prefer. We're not testing whether you can do this without AI; we care about how you use AI to get there.

Pick one of two lenses

Lens A: Make it work.

Take a real friction in your own life, a task you dread, a workflow that wastes real time, a tool you wish existed, and make a working version that fixes it.

Aim for something that actually runs: we want to click through the real thing. Be ambitious, if you reach and it doesn't fully land, show us how you went about it; we'd rather see that than something safe and small.

Lens B: Make it click.

Take something genuinely complicated, a messy dataset, a hard decision, a tangled system, and design an experience that makes it legible and usable.

This one doesn't need to be working software; aim for a high-fidelity, clickable design prototype. We're looking for whether you can take something hard and make it make sense.

Deliverables

1. A video, 3 minutes max (via unlisted YouTube URL)

Walk us through it as if we're seeing it for the first time and don't know the context, talk plainly. Take us along your whole path:

- Why this problem was worth solving for you.
- How you approached and broke it down – the design decisions you made, challenges you hit, the parts worth highlighting, and where AI came in.
- A demo of your creation itself, and optionally, what you would do if you had extra time.
- Less is more. Do not feel obligated to use all 3 minutes if you can convey your message succinctly.

Think of it as a pitch for what you made, not a product demo.

2. A link to what you built - live demo, repo, or clickable design.

If there is anything additional you'd want to share (AI appendix materials, chat prompts, etc.) please share it in the video rather than sending it separately.

Later in the interview process, we may talk through your project with you live - so make something that genuinely represents your interests.

The logistics

Please send the following deliverables to **designchallenge@palantir.com**, within 7 days of receiving this email:

1. An unlisted YouTube video (no longer than 3 mins)
2. A link to what you've built
